1947 CATALOG MATERIAL

Our Mum stock is lighted to take care of orders for out-of-season flowering. There will be some cuttings available in September and in increasing volume each succeeding month.

It will be necessary for us to have orders at least a month in advance of the requested delivery date.

Please indicate the earliest date delivery will be acceptable and the maximum number of cuttings that can be handled in a single shipment.

In all cases where we are unable to ship very close to the requested delivery date, we will indicate our best estimate of delivery of each Variety on the acknowledgement of the order. We suggest that you contact the customer and determine whether he will prefer to accept delivery as indicated or permit us to substitute to the best of our ability.

#### TERMS OF SALE

1. The minimum total order that can be accepted is 500 rooted cuttings.
2. Fifty rooted cuttings of a variety is the minimum that can be supplied.
3. More than 50 of a variety must be in multiples of 50.
4. The minimum number of cuttings of a variety that can be supplied in unrooted cuttings is 250.
5. Quantity discounts will be discontinued. No quantity discounts will be allowed regardless of size of order.

## YEAR 'ROUND FLOWERING OF MUMS

We are taking this opportunity to announce that we have a complete year 'round mum flowering program in progress here at Barberton. At any time you will be able to see a good list of varieties in flower. We wish to extend a cordial invitation to all dealers, salesmen, and customers to visit us and see this development. All promising new varieties will be added to this program just as rapidly as possible. We also suggest that you and your salesmen keep in touch with the mum programs in progress at Ohio State University, Cornell University, Rutgers University and other colleges and Experimental Stations.

### AIR FREIGHT

For the past few years the service of Railway Express Agency has not been entirely satisfactory in the delivery of mum cuttings. Our experience with Air Freight this past season indicates that this service is very practical for the delivery of rooted cuttings in the best condition.

Air Freight is prepared to serve customers who are close to an airport, by phoning them when a shipment arrives, and reconsigning shipments via Railway Express to customers who are too far away to pick up shipments at the airport. We suggest that all salesmen familiarize themselves with Air Freight service and sell the customers on the advantages this service provides for the delivery of mum cuttings.

### MATERIAL FOR PHOTOGRAPHS OF 1948 INTRODUCTIONS.

We will have sufficient blooms of all the Introductions for 1948 available this fall to send you for taking your own Photographs, for use in your Catalog for 1947-48.

We believe that each dealer will find it to his advantage in the future to make his own arrangements for photographs of Introductions and newer varieties. In order to make this possible we will have flowers available for this purpose.

If you plan to take your own pictures, please advise us the number of stems you will require for the type of photograph desired, and we will arrange to send you this material as it becomes available.

We will be flowering all the new varieties over a 6-8 week period, and will have a number of varieties available for photographs at any one time, should you wish to make arrangements to take the pictures here at Barberton.

### DIRECT ORDERS FROM CUSTOMERS.

~~There is apparently some confusion relative to our~~  
policy of accepting orders direct from customers. In order to clarify our position in this matter we wish to advise that, as in the past, we will accept orders direct, but will not solicit business.

CAROLINE YOSICK (SHELBY FLORAL

A small, decorative, lavender pink pompon that flowers naturally October 20. Caroline Yosick gives a sharp and uniform response to black cloth shade and its major value is for August and September flowering. It compliments and completes an important trio for early shading --- Caroline Yosick, Pinocchio, and Gold Coast. It has a very dependable growth habit, does not crown like Jewell, and has a much more rigid stem than Jessie and Pink Dot. The small, decorative flower of Caroline Yosick possesses excellent color-holding quality, and is very satisfactory under even the earliest shadings. Its color is not outstanding in natural daylight but brightens, or softens remarkably under artificial lights. We suggest that you wait to evaluate this variety until the reports from the wholesalers are received.

GOLD COAST (BAUR-STEINKAMP)

A small deep lemon yellow pompon blooming normally October 25. It lends itself ideally to early shadings. Its clean, vigorous free growth habit is outstanding. In growth habit and production, it is very similar to Pinocchio. It compliments and completes an important trio for early shading .... Gold Coast, Pinocchio and Caroline Yosick. The flower is small and firm; the color is intense. Easily grown and consistently dependable-----a top notch cloth house variety. We recommend Gold Coast as the best yellow pompon for early shading.

### LAKME (DEPETRIS)

A glistening small white pompon that matures normally November 12. It possesses a hard, durable, formal flower that easily satisfies the most critical demands for keeping and shipping quality. Its trim, smart appearance is enhanced by a chartreuse eye. The habit of growth is free, wiry and the dark, rigid stems develop a very productive compound spray. In growth habit and cultural requirements it very closely resembles the variety Cassandra. Its black cloth response is rapid and just nicely follows Pinocchio in the shading program. It lends itself well to out-of-season flowering and has been outstanding in the Cornell trials. High, uniform production and the height of quality in its floral make-up assure Lakme a position of eminence in any list of early profitable white pompons.

### RED RUST (DEPETRIS)

An exquisitely colored, well rounded, large pompon blooming November 5. The color is a beautiful blend of orange, red and chrome bronze similar to Natoma. The habit of growth is clean, uniform, and vigorous with excellent foliage and well branched sprays. The scintillating color is an epoch in chrysanthemum breeding but it is sensitive to intense light and is, therefore, best adapted to later greenhouse shadings and natural flowering. It possesses greater vigor and is easier to grow than Natoma. The production excels that of Navaho. In its natural season Red Rust should become a very important variety in creating greater consumer appeal and stimulating interest in intrinsically vivid and useful colors.

### OMEGA (YODER BROS.)

A deep lemon yellow pompon maturing December 10, just nicely following Sunnyside. Omega combines an exceptionally strong, vigorous habit and beautiful dark, glossy foliage with a rigid, wiry spray. The formal flower possesses unusual substance and keeping quality. No blindness has ever been apparent and tests indicate a very high degree of resistance to Verticillium. Omega in its natural season compliments Sunnyside by extending the season of top quality yellow pompons. It is equally valuable on raised benches or ground beds. On the latter with late planting and lights it is easily had for Christmas. It has been successfully lighted into February flowering.

Unhesitatingly we recommend Omega as the best pompon to follow Sunnyside.

### SUNKIST (YODER BROS.)

An intense golden yellow single that flowers normally with Vibrant December 20, for the Christmas season.

The variety lends itself to wide variations in culture and dependably produces a profitable crop. Like Vibrant, Yukon, and Rosalind it is well suited to late planting and ground bed culture. In preliminary trials it has responded very satisfactorily when lighted for delayed flowering. Easily grown and readily sold, Sunkist fills a real demand for golden Christmas daisies.

### BROCADE (YODER BROS.)

A lively cameo pink daisy that blooms naturally with Masterpiece, November 15. The variety is of extremely easy culture. Its free, vigorous growth makes for top production. It is medium to tall in height, and the strong stems develop big, well branched sprays. The response of Brocade to shading is similar to that of Masterpiece and should be grouped with that variety in the shading program. Brocade is the pink daisy to compliment Masterpiece in later shadings and natural flowering. For a mid-season pink single to fill the gap between the early pink singles, Oct. Pink and W. H. Buckingham, and the later variety, Valencia, we suggest Brocade.

### DARK PINK ORCHID QUEEN (DELOWORTH)

An intense mauve pink sport from Orchid Queen with the added attributes of increased vigor in both plant and flower. The importance of its value over its parent for early shading has been proven by extensive tests. The color is much deeper. The flower is larger and more fully rounded. The foliage, stem and height of the plant are larger and stronger than the original. Dark Pink Orchid Queen should rapidly take a prominent position in the list of good standards.

DEBONAIR (YODER BROS)

A rich crimson red decorative pompon that blooms normally December 5. The beauty and symmetry of its form combined with the velvety gloss of its rich and intense color has never failed to create enthusiastic comment. Shaded to flower for the 1945 National Chrysanthemum Show in Cleveland it took top honors in seedling competition. Moderate temperatures, optimum light intensity and other environmental conditions which promote a firm wood and gradual elongation of stem and spray best suit this variety. Debonair can be lighted for the Christmas Season. The growth is vigorous, and healthy and because of the strong consumer demand for this color, it commands premium prices.
